

HARSHAL KHARABE

Python Backend Developer

harshkharabe007@gmail.com | +91 7028653774 | Pune, Maharashtra | LinkedIn | Github | Portfolio

PROFESSIONAL SUMMARY

Backend Engineer(Python) with 2+ years of production experience building scalable REST APIs, event-driven data pipelines, and workflow orchestration systems using Python and FastAPI. I have shipped 25–30 production-grade APIs supporting multi-tenant authentication, RBAC, and async data workflows. Designed an SQS-based event-driven architecture to handle GB-scale CSV ingestion and built a full job orchestration system with cron scheduling, retry logic, and lifecycle management. Seeking a backend-focused role at a product or startup environment where scalable systems and clean API design are valued.

EXPERIENCE

Sattrix Software Solutions, Python Developer - Contributed to the NewEvol cybersecurity product, working on SIEM capabilities for security monitoring and threat detection. - Developed and configured SIEM detection rules to support security event analysis and threat identification. - Built dynamic dashboards with configurable visualizations for improved security monitoring and analytics. - Worked on security reporting functionality to present meaningful insights from security data.	07/2026 – Present Ahmedabad, Gujrat
DataMatter Technologies, Python Developer - Built 15–20 production REST APIs using FastAPI — covering multi-tenant auth, RBAC, job management, and data ingestion workflows across multiple environments. - Designed and implemented tenant-based authentication to support a multi-tenant architecture, improving security and user isolation across clients. - Designed chunk-based CSV ingestion pipeline processing 1–10GB files without memory overflow, using Python streaming and PostgreSQL bulk-insert strategies. - Built audit logging and data integrity validation across ETL pipelines, reducing silent data errors and improving traceability across all production workflows.	04/2024 – 06/2026 Remote

EDUCATION

Bachelor of Computer Applications (BCA), Sant Gadge Baba Amravati University CGPA: 8.12	06/2022 – 05/2025
---	-------------------

TECHNICAL SKILLS

Languages: Python, SQL Backend: FastAPI, Django, Flask, REST APIs Databases: PostgreSQL, MongoDB, MySQL Data & ETL: Pandas, NumPy, chunk-based streaming, ETL pipeline design Cloud & DevOps: AWS (EC2, Lambda, SQS), Docker Auth & Security: JWT, RBAC, multi-tenant architecture
--

PROJECTS

NewEvol Platform, FastAPI · MySQL · DuckDB · Polars - Developed Python-based data processing workflows for the Newevol SIEM platform to process and analyze high-volume security event and log data. - Built ETL and data transformation pipelines using Python, NumPy, Polars, DuckDB and SQL for log parsing, normalization, validation, and structured analysis. - Analyzed large-scale SIEM datasets to identify data patterns, anomalies, processing issues, and data-quality inconsistencies. - Optimized data processing and backend workflows to improve the efficiency and reliability of security-event ingestion and analysis.
File Migration System, FastAPI · Amazon SQS · Redis · Pandas - Built a FastAPI File Migration system processing 1–10GB CSV files via chunk-based streaming — eliminated memory overflow entirely while maintaining data integrity across large imports. - Designed an SQS-based event-driven architecture to decouple file uploads from processing jobs, enabling scalable concurrent ingestion with zero inter-job interference. - Implemented full job lifecycle tracking (queued → processing → success/failed) in PostgreSQL with partial-failure recovery, allowing pipelines to resume mid-file without reprocessing ingested rows.
TrendScout – Reddit Trend Monitoring Platform, FastAPI · Python · PostgreSQL · React · APIs - Built a trend monitoring platform that aggregates and analyzes Reddit discussions to identify emerging topics, sentiment, and market trends in real time. - Designed scalable backend APIs using FastAPI for data ingestion, processing, and export workflows supporting CSV and external integrations. - Implemented export functionality for analytics data, including CSV generation and Slack integration for automated reporting and collaboration. - Developed a modular architecture with secure environment management, enabling seamless integration with third-party services and future feature expansion.
